

Building a U-shaped mask profile

Reproduce a flared, tapered mask with a rounded (U) opening bottom, using the material stack and per-layer shape treatments.

Target (your image)

Result in Profile Studio

Steps

- 1. Material stack** (row 1 = top). Add **indigo** 200 nm, then **lavender** 55 nm.
- 2. Base feature.** Pitch **210**, Space **95**, Opening depth **200**, Top vacuum **25**.
- 3. Opening bottom round:** **47 nm** ($\approx$ half of Space) — this makes the U-shaped bottom.
- 4. Shape the mask.** On the indigo layer press **shape** and add **Round** radius **75** for the flared top.
- 5.** Press **Render**, then **Save .bmp** to export the image.

Why these controls

Round / Taper / Opening-bottom-round each shape a different part: round softens the top corner, taper slopes the whole wall, and the opening-bottom-round curves the base.

Taper (optional here) slopes the whole wall; its angle is the sidewall angle from the horizontal base — **90° = vertical**, smaller = more sloped.

Treatments **combine** and are **order-independent** — round + taper give the same result whichever you add first.

Tips

- The shape button is enabled only for layers the opening reaches.
- Toolbar Save... stores the whole project; Save .bmp exports the picture.
- Add your own colors with "+ New material".
